Browne. 1628.

¶ A New Almanacke and

Prognostication, for the yeare of our Lord GOD

1628.

Being Bissextile, or Leape yeere.

¶ Composed and properly referred

to the longitude and latitude of the Pole Artick of that Famous City of London, and may serue generally for the most part of Great-Britaine.

with the exact rising and setting of the Sun

at London.

Longitude, 25. deg. Latitude, 51-32.

By DANIEL BROWNE willer to the

Mathematickes, and teacher of Arithmetike,

Astra regunt homines, & regit astra Deus.

LONDON
Printed for the Company of Stationers.

Rule to know when the Termes begin and end, and how many returnes are in them.

Hillary Terme beginneth the 23 of January, and endeth the 12 of Febiuary, and hath foure returnes.	Octau. Halla.	Ian. 21
	Quind Hilla.	Ian. 28
	Craſt. Hilla.	Febru. 4
	Octa. Hill.	Febru. 9
Easter Terme, beginneth the 30 of Aprill, and endeth the 26 of May, and hath fiue returnes.	Quind. paſc.	April 28
	Tres paſc.	May 5
	Menſe paſc.	May 12
	Quind paſc.	May 19
	Craſtin aſcen.	May 23
Trinitie Terme beginneth the 13 of Inne, and endeth the 2 of July, and hath foure returnes.	Craſt. Trin.	Iune 9
	Octa. Trin.	Iune 16
	Quind. Trin.	Iune 23
	Tres Trin.	Iune 30
Michaelmas Terme beginneth the 9 of October, and endeth the 28 of Nouember, and hath 8 returnes.	Oct. b. Mich.	Octob. 6
	Quind. Mich.	Octob. 13
	Tres Mich.	Octob. 20
	Menſe Mich.	Octob. 27
	Craſt. animi.	Nouem. 3
	Craſt. Mart	Nouem. 12
	Oct. b. Mart	Nouem. 18
	Quin. Mart.	Nouem. 25

Note alſo that the Exchequer openeth 8 dayes before any Terme begin except Trinity terme, before which it openeth onely 4 dayes.

The vſe of this Table, I haue taken ſome paines to make it plaine to the capacity of euery one that can but reade, &c. by ſetting downe thoſe dayes in the Kalender, euery returne is of 4. dayes, & euery day to a ſeuerall purpoſe: the 1. day is of Eſſoynes, 2 day of Except. 3 day of Retur. breu. and the 4 day of Appearance. Note if any of theſe Returnes fall on the Lords day, that next day is for 2 Returnes.

Rule to know when the Termes begin and end, and how many returnes are in them.

Sundayes after Trinity, are 24 to Aduent Sunday.

Act of Bachilours in both Vniuerſities, is the firſt day of Lent.

Act of Maſters in Oxford, is Iuly the 8. day.

Act of Maſters in Cambridge, Iuly the 3. day.

To

To finde out the time of the full Sea, at the cheefest Ports, in and adioyning this Kingdome.

The Age of the Moone.		Her being South.		These hou. and min. vnderwritten added to her comming to the South, sheweth the Tides.	
Dayes		Houres	Min.		Ho. Min.
1	16	12	48	South-Hampt. Quindbor.	0
2	17	1	36	Redban, Arden	0.45
3	18	2	24	Grauesend tenet	1,30
4	19	3	12	Dunde, Lisbo, Silly	2, 13
5	20	4	00	London, Buscay	3, 0
6	21	4	48	Barwick, Ostend.	3;45
7	22	5	36	Frith, Lith, Narbon	4,30
8	23	6	24	Garnsey, Torbay	5, 15
9	24	7	12	Foy, Lin, Antwerpe	6, 0
10	25	8	00	Bristol, Lamon	6,45
11	26	8	48	Milford, Bridgewater	7,30
12	27	9	36	Portland, Harflew	8,15
13	28	10	24	Dorwel, Emden	9,0
14	29	11	12	Deepe, Lux	9.45
15	30	12	00	Bolen, Douer	10,30

The vse of this Table.

Adding the houres adioyning to the Portes in this Table contained, vnto the Moones comming to the South, produceth the time of the tide in that Port. Example, the Moon is 9 daies old, now in this Table vnder the age of the Moone, I finde 9 in the first space, In 2 there I find her coming to the South, at 7 and 12 min. Now for London, I finde it in the last space 3 houres, which added to 7 houres 12 min: maketh 10 houres, 12 min: hie water at Lond. the same 9. day.

A memoriall of the time sithence some great Accidents vntill this present yeere, 1628.

How

How the principall members of mans body are gouerned of the 12. *celestiall Signes of the Zodiaque, the* present Anathomy doth shew as *Marcus Manilius* hath declared the same: Whose Latine *Hexameters*, is here following in 8. English *Hexameters*.

Aries, ♈

♉ Taurus,

♋ Cancer,

♍ Virgo,

♏ Scorpio,

♑ Capricorn.

Gemini, ♊

Leo, ♌

Libra, ♎

Sagitarius, ♐

Aquarius, ♒

Pisces. ♓

Head and face Aries, **necke and throate** Taurus **beholdeth,**
To Gemini **th'armes. to** Cancer **brest stomacke and lounges:**
As Leo **rules the backe and heart, so** Virgo **delighteth**
In guts and belly: reignes and loynes Libra **retaineth.**
Scorpio **the secrets and bladder challengeth: of thighes**
Only Sagitarius **the gouernour is:** Capricornus
The knees as subiects doth guid, but Aquarius **holdeth**
The legs: and Pisces **maintaine the feet to be their right.**

☉, is the beginning of the vitall power which is the heart. ☾, the vertue naturall of the liuer. ♄, of the vertue receptiue. ♃, of the vertue quickning. ♂, of the vertue of anger. ♀, of the vertue of lust. ☿, of the vertue of imagination.

Now warme meates, warme cloathes, with warme exercise embrace: Drowsinesse and Venery, Bathes, and Phlebotomy abandon, yet may ye sleepe longer then when the daies be the longest. All hath a time and place, and nothing seasonable alwayes.

These Arts are taught by the Author, *viz.*

Arithmeticke
- The keeping of a Merchants booke, By Debitor, and Creditor.
- Whole numbers and fractions.
- Extraction of rootes.

Geometry
- The principles thereof, with practise,
- Surueying with many vsual Instruments.
- Reducing of Maps, and Dialling.
- The vse of both the Globes.

Instruments made in brasse by
- Mr. *Elias Allein*, ouer against Saint *Clement*.
- *Iohn Blaton* in Tower-street.

Instruments made in wood by
- Mr. *Iohn Thomson* in Hosier-lane.
- *Nathaniel Noble*, in the Strand.

Browne. 1628.

A PROGNOSTICATION for this present yeare *of our Redemption.* 1628.

Amplified with new additions very commodious and profitable: with new Tables and Rules thereto annexed, for all those that vse Purchasing or buying of Annueties, or borrowing; *fit for sundry occasions, which the Ingenious may vse to their pleasure and profit.*

By DANIEL BROVVNE Well-Willer to the Mathematickes, and sometime Scholler of Christs Church in *London*, that teacheth Arithmetick and Geometry.

When I behold the Heauens, euen the Workes of thy fingers, the Sunne, Moone, and Starres which thou hast ordayned for signes, seasons and for dayes and yeares.

LONDON,
Printed for the Company of Stationers.
1628.

A briefe Declaration of the foure Quarters of this Yeare. 1628.

Sol in ♈, ♉, and ♊.

Hereafter the Winter, the Spring, the Summer and Harueſt, ſhall not ceaſe ſo long as the earth remaineth.

VVInter according to our Engliſh accompt began the laſt yeere 1627. at the time of the Sunnes ingreedience into that cold & dry ſigne Capricorne, viz. the thirteenth day of December, at which time was the Brumall Solſtice or ſhorteſt day in the yeere, by reaſon of the Sunnes greateſt South declination from the Æquinoctiall, &c. and continueth in this yeere 1628. vntill the 10 day of March the ſeaueuth houre, and 55. minutes.

The Winter ſeaſon is cold and moyſt, and therefore encreaſeth fleame, which is like in complexion vnto it. The Diſeaſes incident to this Winter quarter, is griefes in the ſides, Rhume, Coughs, Joynt-ache, and Head-ache, and the ſtone.

A cold Winter and moyſt is profitable, yet too much moyſtneſſe deſtroyes the Winter Corne, a warme and moyſt Winter is vnwholſome.

A Progrostication.

Sol in ♈, ♉, and ♊.

The Lord God causeth grasse to grow for the cattell, and herbs for the vse of man, that hee may bring forth bread out of the earth.

The Spring.

THe Sunne hauing finished the Winter, with the last part of Pisces, doth at his entrance into the first minute of Aries, make the artificiall day equall with the night. Sol returneth the most delectable annuall reuolution called the Spring, which will be this yeare, the tenth day of March, the seauenth houre, and fifty fiue minutes. The Sunne, Plato affirmeth to be the soule of the World, and all liuing things to receiue life from him: for all augmentations, increasements, and ripenesse of fruits, beasts, and other things vpon the earth, is of Sol, hee is also the giuer of times; and therefore at this time hee returneth, the most temperate time the Spring, this time encreaseth blood, and bringeth all the parts of the body to a temperance as nigh as it can, for it of all other times is the most temperate, neither extreame hot nor cold, neyther moyst nor dry. And Galen doth much blame them that name it to be hot and moist, which (he sayth) is of all other the most pestilent state of ayre. The diseases of the Spring, is falling sickenesse, Squinancy, Coughes, Ache in the necke, belly, legs and feete.

A warme and moyst Spring is commendable, if the Spring be dry and something warme, there shall be but little fruite yet very good: if cold, the fruits will be rotten and neuer come to be good nor be ripe.

Sol in ♋, ♌, and ♍.

Go to the Pismire, O sluggard, behold her wayes, for she prepareth her meate in the Summer.

SUmmer beginneth, at the Sunnes ingresse into the beginning of Cancer: at which time hee is in his nearest ascent vnto Verticall point, making his greatest Declination towards the

the North from the Aequinoctiall, and causing the Aestiuall or Summer Solstice, and per consequens, the longest day, and shortest night in the yeare, which will be this yeare the 10. day of June 2. hou. 22. min. in the morn. The Summer is in complexion hot and dry, and therefore meete to encreale choller, which at this time doth abound.

The diseases of the Summer, are continuall feuers, burning Feauers, paines in the head and belly, Vomits, burning in the heart and breast, with immoderate sweating.

Much rayne in Summer putrifies the fruites, and there shall be no great store of graine: many diseases will follow, if it be ouer dry, it argueth scarcity in all manner of graine, the Summer fruites will be wholsome, fishes shall die, if ouer hot there will be many sicknesses, and store of fruite that Summer, If (to conclude) it be cold, the yeere will be wholsome, but the fruites will be late: so the Elements must be well temperated, else the earth cannot be fruitfull.

If the Summer be bad, or any other season be bad; yet if our selues be good, all the better: Good God make vs more good, or at least lesse bad, aswell for thine owne glory, as for our owne safety.

Sol in ♎, ♏, and ♐.

Let vs now feare the Lord our God, that giueth raine both early and late in due season: he reserueth vnto vs the appointed weekes of the Haruest.

The Haruest Quarter, or fall of the leafe, beginneth at the time of the Sun entring into the first minute of the second Aequinoctiall Signe Libra, taking place this yeere the xiii. day of September, at 3. and 13. minu. in the morn. When the Day and Night accord secondly in equall length. The Haruest is dry of complexion, and neither onely hot nor onely cold, but is distemperate in heate and cold, so may it not be called iustly (as most men do name it) cold and dry. In this time doth melancholy encrease.

The diseases which commonly doe happen at this time, are oppilations of the Spleene, Dropsies, Consumptions, Ache in the huckle-bone, fretting of the bowels, paine in the knees and thighes.

A cold and dry Autumne is laudable: much moysture doth putrifie the Aimes, the beginning very dry, the last part moyst, shewes penury of fruite the insuing yeare, if the first part be hot it will be full of sicknesses, if too cold it is hurt to fruite ungathered.

A definition of Astronomy.

ASstronomy is the perfect knowledge of the miraculous mouings of the Planets, and Heauens, (and especially of the Sunne and Moone) whereby is cauſed the variety of times, dayes, yeares, and ages; and the diuersity of all naturall things, as hot, cold, moyst, and dry, which are augmented or diminished by the more or lesse influence of these two Luminaries, as they come neere vnto vs at sometimes, or depart further from vs, at other times, with diuers motions in diuers climates, which cauſeth not onely variety of times in sundry climates; but also the variety of diuers complextions, formes, and dispositions of all Creatures vnder the face of Heauen, none other accidentall conteng, voluntary or violent cauſe, to the contrary notwithstanding. And this is that Plato meaneth by these words, Vt tempus cognoſceremus ac vniuerſæ naturæ ordinem, &c. That is, to know the times and vniuersall order of nature: And doubtlesse, who so well considereth the marualous effects that are cauſed, especially by the variable mouing of the Sunne in the Zodiacke, muſt needes acknowledge it to be the chiefe instrument and meane that God vseth in the generation, preseruation, and alteration of all Creatures that are contayned in the world, of generation and corruption. And for this consideration, certaine of the ancient Philosophers, called the Sunne, the soule of the Mayde o-

thers

ther, the eye; and other also, the heart of the world. Plato also affirmeth, that the Sunne is the soule of the world. And that all other living things receive life from thence; and hereof commeth the saying of the Philosophers, Sol & homo, generant hominem, That is, The Sunne and man, beget man, &c.

And also, by the motions of the Heavens wee have the distinct course of Times, Dayes, yeares, and ages, aswell for the consideration of sacred Prophesies, accomplished in due time foretold, as for high mysticall Solemnities holding, and for all other humane affaires, conditions, and covenants upon certaine time betweene man and man, with many other great uses.

Iudiciall Astronomy.

IT hath beene an order and a custome (amongst the most excellentest and wisest Physitions, to choose the Moone for the principall Significatrix of the sicke Person, and according unto her motion, situation, and configuration (with other Planets) have given iudgement on the increasing, mittigation and alteration of the disease; which of the Physitions is called Crisis, that is a swift and vehement motion of a disease, eyther to life or death, and it happeneth about the supreame intention of a disease. And Galen (in commento de diebus Criticis) sayth. A Physition must take heed and advise himselfe of a certaine thing that faileth not neither deceiveth, which the Astronomers of Egypt taught) that is to say when the body of the Moone is joyned with fortunate Planets and Starres, dreadfull and fearefull sicknesse commeth to good end. And therefore the expert in that excellent science of Physicke, doth observe and marke how the Moone passeth through the Zodiacke; and with what Planets she is joyned; & thereof they do understand much of the alteration of the sicknesses, for the Moone with the good Planets, as Iupiter and Venus, or aspected well of them tendeth to good. Contrarywise with the evill Planets as Saturne and Mars, or evill aspected

pected of them, doth pronounce and cause euill essence of the sickenesse. in so much that such dayes in euery moneth is to be accounted more dangerous then the rest to fall sick in. Which dayes I haue noted in my Almanacke, with their Characters, vnder the Aspects of Luna to Saturne and Mars. Thus a ☌ Conjunction, this a ☐ Quartile, this a ☍ Opposition: For example, The 5. day of Aprill, the ☌ of Saturne and Luna the Moone, being in Virgo of ♄ afflicted, the griefe shall proceede of viscuous and tough fleame. The thirteenth of Aprill the ☍ of Mars and Luna, the Moone being in ♐. of ♂. afflicted, the griefe is of blood and red choller. For Astrologers say, that among all the other Planets the Moone (in ruling) hath most power and mastry of mens bodies. Ptolomeus saith, vnder the moone is contained sicknesse, therefore about the alteration of mans body, the Moone worketh principaly; and because her orbe is neerest to the earth, sendeth vs the vertue and impression of the other Planets; and causeth the mutability and alteration of mens bodies, to be good or euill, according to the nature of that Planet with whom she is adioyned, which agreeth to the saying of Ptolomeus in the 16. Aphorisme of his Centiloquio. Behold the motion of the Moone as she passeth through the Criticall, Judicial and mortall dayes, for if she be in them fortunate, it will fall out well: if Unfortunate, the contrary. And by the censure of the great Astrologicall and Theologicall Doctor Frauncis Iunctinus, that by the motion of the Moone and Planets are knowne the Criticall and dangerous dayes, when the sicknesse will bee more remisse and placable. And when it is conuenient to vse outward, or inward medicines.

Concerning caution in ministration in Physicke, as purgations, laxatiue, or phlebotome, seeing the fore sight, and preuention of such especially appertaineth to the learned in Physicke, wherein they can helpe themselues, and others, God giuing a blessing to their practise, for of the most high commeth healing. I commit them to the consideration of the learned, in that excellent Science of Physicke and Chyrurgery.

Husband.

Husbandicall Elections in planting, grafting, and sowing.

To all things there is an appointed time, and a time to euery purpose vnder the Sunne. A time to plant, and a time to plucke vp.

BEfore you plant or graft, consider the winde, for if it be in the North, or Northeast, or by north cease thy labour, because the North wind, causeth dry colds, and hurteth the fruites and flowers of the earth.

Generally plant or graft in the ending of Autumne, or beginning of Spring: especially the moone increasing in Taurus, Virgo, Capricorne, or Pisces.

Fell timber from Midsommer to Christmas, especially from the change to the full, in dry dayes and not in wet and windy, leauing such as be winde fallen, as well for that the timber is not permanent, as also that Astrologers say, the houses built therewith, are subiect to danger in time of tempests; you are best before the retiring of the sap to cut the timber tree round about, vntill you come neere vnto the end of the sappe, and so leaue the tree growing vntill you see that the sap hath all runne downe, and ceased dropping; whereby you haue purified the tree.

Fell coppies in the first quarter, the moone in ♈, ♌, or ♐.

Sheare sheepe in the increase.

Geld all the increase, the moone in ♈, ♌ ♐.

Cut vines, in February, or September, the ☽ in ♈, ♌, or ♑.

Remoue trees the last Quarter, in Nouember, or February, the ☽ in ♈, ♌ ♑

Sow seeds, whose fruite will be round, three, or foure dayes before the full.

But to sow for stalk, take the increase from February, to Iune.

The

The moone in ♉, ♋, ♍, or ♑, in △, or ✱, with ♄, is at a time to plant, graft, or to do any kind of husbandry, the like is the moone in ♈, in ✱, or △, with ☿, or ☽.

Note also that it is best time to plant in the second quarter of the Moone, so the ☽ bee not aspected by ☌, or ☐, or ☍, or ♄, or ♃.

Sow Corne the Moone in ♋.

Of the Eclipses this Yeare.

1628.

AN Eclipse of the Moone will happen the 10. day of Ianu. the 8. houre, 8. min. at night, when the Moone passing by the Head of the Dragon, shal be found opposite to the Sun, the digits Eclipsed are 10. degrees, and 45. minutes, the whose durance from the beginning to the end, is 3. houres and 54. minutes.

The cause of the Moone Eclipsed, is the Sunne being in the contrary point to the full moone, enforceth the shaddow of the earth to ben directly put betweene the Sunne and Moone, towards the Moone, rising more or lesse of the Moone as shee differeth from the Ecliptical.

ALSO nothing else is the Eclipse of the Sunne, but the direct putting the body of the Moone betweene the Sun and the earth, or betweene our light, and the Sunne, which chanceth onely at the change. By this you may gather that the darknesse at the death of Christ. That St. Luke sayth was about the 6. houre, and continued unto the 9. houre, which according to our account, is from 12. a clocke to 3. Not to stand by naturall ecliptical cause; but by supernaturall or miracle: For it was at the full Moone, for St. Augustine sayth, that the Iewes did keepe their feast of Dalleouer, alway at the Full Moones, and at that time Christ suffered. Which enforced Dionysius a Senator of Athens, beholding that Supernaturall Eclipse, cryed out saying: Aut Deus

natura

naturæ patitur, aut mundi machina dissoluitur: the God of nature this day suffereth, or else the World must needes perish for ever.

Athens is from Hierusalem 780. miles north-west, and by west, so farre was Dyonisius from Ierusalem, when he did behold that Eclipse: The which Dyonisius was the first that converted the French-men to the faith of Christ, doing there great miracles: In the honour of whom was erected the rich Abbey of Saint Denise, not farre from Paris, where as the Kings and Princes of France were wont to be buried.

An

An easie Table, for all those that vse Trading, buying of Annuities, purchasing or borrowing, after eight in the Hundred, at Compound interest.

What a 100 pound forborne, for any time vnder 21 yeares commeth vnto, according to the rate of 8. pound in the hundred, at compound intrest.

	l.	s.	d.
1	108	0	0
2	116	12	9
3	125	19	5
4	135	0	10
5	146	18	7

18	187	8	9
19	192	1	5
20	196	7	3
21	200	6	8

The

The Vse of these Tables.

A Man dyed, who gaue by will to a Child 100. l. then borne, his executors agreeth to set out the 100. l. to occupy till the Childe come to the age of 21. yeares, Coueranting with the party to pay the interest, and the interest vpon interest, as it groweth but after the rate of 8. pounds per Annum. What will it be at the end of 21. yeares, I looke in the Table ouer against 21. yeares, and there I finde it is 503. pounds, 7. shillings, and 8. pence, so much it amounteth into in 21. yeares.

The Vse of the second Table.

I Buy a Lease worth 20. pound ouer the rent per Annum, this lease is to endure 12. yeares. & hat shall I giue for this 20. pound per annum for the 10. yeares, reckoning my money after compound interest, I looke in the Table for 10. yeares, and ouer against it I finde 134. pounds, 4. shilling, and 2. pence.

An Abstract

An Abſtract of a Directi-
on concerning reall Contracts.

WHoſoeuer ſhall deſire to Pur-
chaſe or put to Sale, to take
in Leaſe, or let to Farme, to
Grant, Aſſigne, Set ouer,
Exchange, or otherwiſe to Con-
tract or deale with or for any Lands,
Leaſes, Mantion Houſes, Rents, An-
nuities, &c. Or to redeeme any ſuch
from danger of Forfeiture: may
haue ready meanes for the accom-
pliſhment of what ſhall bee deſired,
on the one part or on the other, in
any

ny the cases aforesayd, or the like.
At the Portcht-House right against the end of shooe-lane in Holborne. *London.*

God saue the King.

FINIS.
